Living Standards and Wellbeing: Results from the NZLSA 2010 postal survey

NZLSA 2012 Wellington Policy Seminar
Findings and Policy Implications

Victoria University of Wellington
June 28th 2012

Peter King

Family Centre Social Policy Research Unit

New Zealand Longitudinal Study of Ageing (NZLSA)
OUTLINE

• Wellbeing as a multidimensional attribute
• Changing composition of wellbeing
• To aggregate? Or not?
• Monetary and non-monetary measures
• Subjective and non-subjective measures
• Comparison of selected measures
• Changing composition and interaction of subjective and non-subjective measures
• Policy significance
• Further research
Wellbeing as a multidimensional attribute

- Associated with eudaimonic rather than hedonic approaches
- Psychological wellbeing rather than subjective wellbeing
- Sen’s Capabilities approach
- Measures multiple aspects of people’s lives
- Measurements of individual aspects can be aggregated to construct overall measures
- Measurements of individual aspects can be treated separately
To aggregate? Or not?

Aggregation
- Provides summary measure
- Example of Human Development Index
- Loss of detail

Disaggregation (or non-aggregation)
- Retains detail
- Changes in composition can be tracked
- Evidence for social policy
Monetary and non-monetary measures

- Income and poverty
- Non-monetary deprivation measures
- Non-monetary living standards measures
- Relationships between monetary and non-monetary measures
  - Inexact match between the two at the individual level
  - Balance of the two changes during the life-course
Subjective and non-subjective measures

Subjective
• Happiness
• Life satisfaction

Non-subjective
• Living standards
• Quality of life
• Health
• Social connectedness
Comparison of selected measures by age group

<table>
<thead>
<tr>
<th>(Income)</th>
<th>Living standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Happiness</td>
<td>Life satisfaction</td>
</tr>
<tr>
<td>Quality of life (WHOQoL)</td>
<td>Quality of life (CASP)</td>
</tr>
<tr>
<td>Social provisions</td>
<td>Physical health</td>
</tr>
<tr>
<td>Mental health</td>
<td>Depression</td>
</tr>
</tbody>
</table>

- Normalised mean scores – 0 to 100
- Comparisons of means by 10 year age groups
- Correlation coefficients and significance levels (age and measure)
- Cross-sectional, not longitudinal
### Mean equivalised after tax household income minus housing costs by age group

<table>
<thead>
<tr>
<th>Age</th>
<th>Mean income</th>
</tr>
</thead>
<tbody>
<tr>
<td>50-59</td>
<td>$40,000</td>
</tr>
<tr>
<td>60-69</td>
<td>$37,000</td>
</tr>
<tr>
<td>70-79</td>
<td>$30,000</td>
</tr>
<tr>
<td>80+</td>
<td>$25,000</td>
</tr>
</tbody>
</table>

$r = -0.135, p < 0.001$
ELSI living standards scores by age group

\[ r = 0.152, \ p < 0.001 \]

Std. Dev. = 20.95
Self rated happiness by age group

<table>
<thead>
<tr>
<th>Age</th>
<th>Normalised mean scores</th>
</tr>
</thead>
<tbody>
<tr>
<td>50-59</td>
<td>70</td>
</tr>
<tr>
<td>60-69</td>
<td>80</td>
</tr>
<tr>
<td>70-79</td>
<td>90</td>
</tr>
<tr>
<td>80+</td>
<td>100</td>
</tr>
</tbody>
</table>

$r = 0.108, \ p < 0.001$

Std. Dev. = 18.55
Self rated satisfaction with life by age group

$r = 0.093, \ p < 0.001$

Std. Dev. = 15.37
WHOQoL 8 Scores by age group

<table>
<thead>
<tr>
<th>Age Group</th>
<th>Normalised Mean Scores</th>
</tr>
</thead>
<tbody>
<tr>
<td>50-59</td>
<td>80</td>
</tr>
<tr>
<td>60-69</td>
<td>80</td>
</tr>
<tr>
<td>70-79</td>
<td>80</td>
</tr>
<tr>
<td>80+</td>
<td>80</td>
</tr>
</tbody>
</table>

$r = -0.018, p > 0.05$

Std. Dev. = 13.99
Total \( r = -0.028, \ p > 0.05 \)
Autonomy and control \( r = -0.007, \ p > 0.05 \)
Pleasure \( r = 0.056, \ p < 0.01 \)
Self realisation \( r = -0.104, \ p < 0.001 \)

Std. Dev (Total) = 15.52
Attachment $r = -0.093$, $p < 0.001$
Social interaction $r = -0.063$, $p < 0.001$
Opportunity for nurturance $r = -0.224$, $p < 0.001$
Reassurance of worth $r = -0.067$, $p < 0.001$
Reliable alliance $r = -0.079$, $p < 0.001$
Guidance $r = -0.055$, $p < 0.01$
Overall $r = -0.121$, $p < 0.001$

Std. Dev. (Overall) = 10.46
Physical health  \( r = -0.356, \ p < 0.001 \)
Mental health  \( r = 0.195, \ p < 0.001 \)

Std. Dev. (Physical) = 10.43
Std. Dev. (Mental) = 8.64
Depression score by age

- Normalised mean scores

- Depressions

- Std. Dev. = 16.37

\[ r = 0.013, \ p > 0.05 \]
## Summary of change by age group

<table>
<thead>
<tr>
<th>Worse</th>
<th>No change</th>
<th>Better</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Income)</td>
<td>WHOQoL</td>
<td>ELSI</td>
</tr>
<tr>
<td>CASP</td>
<td>Depression</td>
<td>Happiness</td>
</tr>
<tr>
<td>Social provisions</td>
<td>Life satisfaction</td>
<td></td>
</tr>
<tr>
<td>Physical health</td>
<td></td>
<td>Mental health</td>
</tr>
</tbody>
</table>

Overall mean scores calculated
Overall mean scores calculated (using overall scale scores for multi-scale measures) weight = 1
Calculated for each respondent who completed all relevant measures (n = 2287)
When all selected measures included, there is a small but significant increase in the mean over all age groups
When subjective measures excluded, there is no change in the mean over all age groups
Including: $r = 0.051$, $p < 0.05$; Excluding: $r = 0.003$, $p > 0.05$

**Subjective wellbeing homeostasis?** (Cummins and Nistico, 2002)
Subjective wellbeing homeostasis

- Cummins (e.g. 2002) has referred to the tendency for people to maintain a positive cognitive bias as “subjective wellbeing homeostasis”
- This seems to be reflected in the findings presented here, as scores for subjective happiness and satisfaction with life measures tend to increase with age, at the same time as scores for functional measures decline.
Policy significance

- Choice of measure(s) matter(s)
- Individual measures provide (slightly) different pictures
- Disaggregation provides valuable information to inform focused policy responses
- Undue reliance on happiness based measures likely to mask needs in other areas of life
- Present analysis suggests the CASP and Social Provisions measures point to needs in the social policy area
Further research

• Other measures within the NZLSA dataset
• Methods of aggregation
• Weighting
