

How to embed eTV videos in Stream

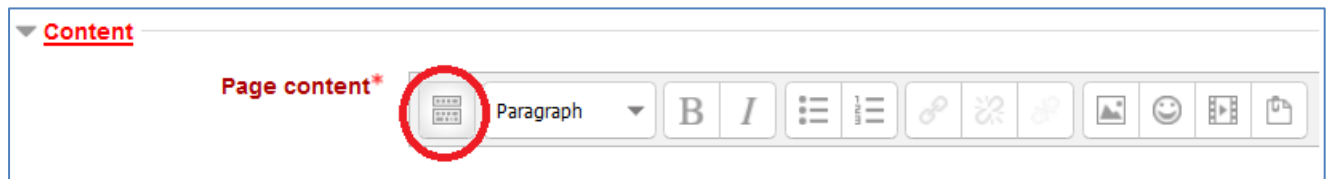

Please note: eTV does not work with Internet Explorer. Recommended browsers are Google Chrome 1+, Firefox 5+, or Safari 4+. If you have problems viewing eTV, regardless of what browser you're using, please ensure that Javascript and Cookies are enabled and that you have cleared your caches.

1. Go to the selected video in eTV. Click on **Get embed code** on the right side of the page. You will need to agree to the eTV Embedding Code Agreement & click Download. Then select and copy the presented code.

2. Go to the Stream page where you wish to insert the video, and turn editing on.

Tip: You may want the video to display on the Stream page as a *link* rather than a *frame* of the actual video to reduce loading time and clutter on the page. If so, first select **Add an activity or resource** and add a **Page**.

3. In editing, fill out the required fields in the **General** section. In the **Content** section click on the **Toolbar Toggle** option as below.

4. Then click the **Edit HTML source** option -  to switch to code.

5. Paste the code from eTV and click on **Update**. Save changes.

6. If you need any help with this, please contact your [Subject Librarian](#).
